

ABSTRACT

[0045] In one embodiment, a method is provided. The method of this embodiment includes determining, at least in part at a first node, at least one communication protocol via which a second node is capable of communicating with the first node. In this embodiment, the determining of the at least one communication protocol may be based at least in part upon at least one parameter received from the second node during an initialization of communication between the first node and the second node. The at least one parameter may specify, at least in part, the at least one communication protocol. Of course, many alternatives, variations, and modifications are possible without departing from this embodiment.
